Information Systems and e-Business Management

The new journal *Information Systems and e-Business Management* (ISeB) is aimed at providing a forum for the research communities in the fields of information systems and e-business to exchange state-of-the-art developments and research. The journal seeks to publish forward-thinking, groundbreaking work concerning the interplay between information systems, business digitisation, e-commerce, enterprise strategy, and management. The journal is one of the first to emphasize well-established information systems research as much as research in the emerging fields of e-business and e-commerce, in order to facilitate active synergies. It focuses on the core tasks of Information Systems Management: the conceptual analysis, design, and deployment of information systems. Topics are for example information modelling, domain-specific information systems, and the combination of intra-organizational and inter-organizational information systems. The journal will

- ▶ Provide a vibrant forum for both academicians and industry specialists;
- ▶ Promote innovative research on all aspects of information systems and e-business management from the system, analytical, behavioural, economic, strategic, organizational, and technological perspectives;
- ▶ Ensure the rapid dissemination of the latest research and innovation in the context of a rigorous review process.
